

HOW TO GET STARTED INVESTING

IDENTIFY YOUR AREA OF INTEREST

Types of Assets

- Equity – Stocks, ETFs, indexes,
- Commodities-Gold, Silver, Platinum,Copper and Cryptocurrencies,
- Real estate and Land.

Things to take into account

- Macroeconomics and trends,
- Risk appetite,
- How much time do you have ?
- Duration of Investment,
- Inflationary and Deflationary market.

TRADING PLATFORMS

- Research online brokers in your country , consider brokers with low fees, no initial deposit.
- With an online broker you control your transactions and can choose to buy and sell whenever you want, including withdrawals and deposits.

Example of Stock Market brokers (Do a google search there are many options)

Example of cryptocurrency brokers-all accounts can be open online

NEED TO
KNOW

When to Buy

When to Sell

When to Hold

INVESTMENT GOALS

- *Educate yourself:*

Knowing when to buy is the most fundamental thing. Buy low and Sell high. Buy on red and sell on green. Learn to read basic charts on, yahoo, trading view, or your trading platform. Also read news on companies your interested in: check out yahoo finance, google finance, Barons, seeking alpha, Bloomberg among many.

- *Understand the Market:*

You're in this game with Hedge funds and Big dawgs, don't let your investment goals be dictated by emotions and daily news. The market goes up and down all the time, but up with a long-time horizon in the right investments. Set clear investment goals and have an investment thesis, it will help you control your emotions.

- *Most investments should have a horizon of 4 to 5 years for them to play out.*

If you want to participate in short term trading , you need proper trading tools e.g. Trading view, don't do this blindly! It's a recipe for disaster.

- *Little time to Manage your investments:*

Consider ETFS- these return 25% per year (better than any bank can provide) , however also long term horizon. Ask yourself which industries are industries of the future? A hot tip is Semiconductor ETFs!! (Do your own research no investment advice).

- *Cryptocurrency is very volatile and risky because they are in discovery mode: for beginners consider long term blue chip coins like:*

Bitcoin, Ethereum and Polkadot, and practice dollar cost averaging. Meaning adding when prices are low, and buying for a long term horizon.

THANK YOU!!GOOD
LUCK IN JOINING THE
BULLS!
